

## Wall Bracket - Chrome Plated - For Shower Screen

## Wall Bracket for Hinge and Return/Fixed Panels

This wall bracket is designed to securely fix hinge and return or fixed glass panels to the wall. It's an essential component for ensuring the stability and proper alignment of your shower screens.

### Key Features:

- **Recommended Quantity:** 3 brackets per panel for optimal support
- **Gap:** Maintains a 3mm gap between the glass and the wall
- **Finish:** Chrome-plated for a sleek, modern look
- **Edge Design:** Square finished edges for a clean, sharp appearance
- **Compatibility:** Suitable for 8mm & 10mm thick glass
- **Mounting:** Comes with 2 compression/friction screws for secure installation
- **No Drilling Required:** No holes needed in the glass, making installation easier
- **Material:** Crafted from durable solid brass for long-lasting strength
- **Included:** 1 fixing screw and clear gaskets for a complete setup
- **Additional Requirement:** Silicon must be applied along the glass edge when using friction brackets

### Important Note:

While some may consider installing these along the floor, we advise against it. Doing so may damage the waterproofing membrane due to the screw placement. Additionally, this configuration will place the full weight of the glass on the bracket rather than evenly distributing it across the sheet, and will result in the glass being positioned 3mm off the floor.
